Introduction

The term Physical contact is used to describe the use of touch for many purposes in numerous different contexts. This is a controversial and complex area. There have been instances where schools have had a no touch policy and totally forbade staff from touching children. This is in fact against all statutory guidance and is not tenable.

The Children Act 1989 makes it clear that the paramount consideration in any decision should be in the best interest of the child concerned. Paramount in this context means that it should be the first thing people think about and it takes precedence over other considerations.

Physical contact should always be about meeting the needs of the child. Actions that can be ambiguous are open to misinterpretation. Staff should always think before making any physical contact. They should be clear about why their actions are in the best interest of the child concerned. They should remember that some children like physical contact and some do not. This information should be contained in a child's Positive Handling Plan.

Aims

Oakwood Community School believes that children have the right to independence, choice and inclusion, and we seek to provide opportunities for personal growth and emotional health and wellbeing. However rights also involve responsibilities, such as not harming other people's rights.

Children unable to control their actions or unable to appreciate danger have a right to be protected; and staff have a duty of care to exercise.

Rationale

Children learn who they are and how the world is, by forming relationships with people and things around them. The quality of a child's relationship with significant adults is vital to their healthy development and emotional health and wellbeing.

Many of the pupils who require emotional support from school may have been subject to trauma or distress or may not have had a positive start in life. With this in mind, staff seek to respond to children's developmental needs by using appropriate safe touch.

Our policy takes into account the extensive neurobiological research and studies relating to attachment theory and child development that identify safe touch as a positive contribution to brain development, mental health and the development of social skills. We have adopted an informed, evidence based decision to allow safe touch as a developmentally appropriate intervention that will aid healthy growth and learning.

Our policy rests on the belief that every member of staff needs to know the difference between appropriate and inappropriate touch. Hence, staff need to demonstrate a clear understanding of the difference. Equally, when a child is in deep distress, staff need to know when and how sufficient connection and psychological holding can be provided *without* touching.

- All staff need to be clearly aware of procedures within this policy. The policy should be seen in the wider context of the 'Behaviour Policy' and the policy on the 'Use of Force to control or Restrain Pupils' which aims to promote positive values and good behaviour choices.

Different types of Touch

There are four different types of touch and physical contact that may be used, these are:

1. Casual / informal / incidental touch

Staff use touch with pupils as part of a normal relationship, for example comforting a child, giving reassurance and congratulating. This might include putting an arm out to bar an exit from a room, taking a child by the hand, patting on the back or putting an arm around the shoulders. The benefit of this action is often proactive and can prevent a situation from escalating.

2. General reparative touch

This is used by staff working with children who are having difficulties with their emotions. Healthy emotional development requires safe touch as a means of calming, soothing and containing distress for a frightened, angry or sad child. Touch used to regulate a child's emotions triggers the release of the calming chemical oxytocin in the body. Reparative touch may include stroking a back, squeezing an arm, rocking gently, cuddling, tickling or sitting on an adults' lap, hand or foot massage.

3. Contact/interactive Play

Contact play is used by staff adopting a role similar to a parent in a healthy child-parent relationship. This will only take place when the child has developed a trusting relationship with the adult and when they feel completely comfortable and at ease with this type of contact. Contact play may include an adult chasing and catching the child or an adult and child playing a game of building towers with their hands.

This sort of play releases the following chemicals in the brain:

- Opioids – to calm and soothe and give pleasure;
- Dopamine – to focus, be alert and concentrate;
- BDNF (Brain Derived Neurotrophic Factor) – a brain ‘fertiliser’ that encourages growth.

4. Positive handling (calming a dysregulating child)

Staff may use force as is reasonable in all the circumstances in order to prevent a pupil from doing, or continuing to do, any of the following:

- Committing a criminal offence (or, for a pupil under the age of criminal responsibility, what would be an offence for an older pupil);
- Causing personal injury or damage to property;
- Prejudicing the maintenance of good order and discipline at the school or among any pupils receiving education at the school, whether during a teaching session or otherwise.

All staff at Oakwood have been trained to use team teach and always strive to help students stay engaged at school and produce the best outcomes
